Hiring Manager's Full Name
Amazon
Seattle, WA

Dear Amazon:

My name is Alexander Shaver and I am excited about the Software Development Engineer 1 opportunity at your company. I love developing software with creativity and passion. I am a software engineer with a unique outlook on problem solving and a thirst for learning more. I am particularly interested to work for a company and a team that is all about communication, collaboration, and the creation of innovative products that we can be proud of and fit the customer's needs. When I came across your job posting, I was immediately struck by the clear passion for technology, the value for creative thinking, and the respect for dedicated people.

For the last four-months I wrote code. Lots and lots of code. From the moment I logged on in the morning to the late afternoon -- I coded -- and I loved it! I loved working in every language I could get my hands on and enjoyed approaching each one as a fun puzzle to solve. Each new language is another tool in my arsenal to solve problems and help clients get what they want in the best way possible.

I want a job where I can code every day and work with a team who is united in creating the best possible product we can for our customers, to see them happy, and to be proud of what we did. I want to work for a company who seeks to provide their customers with what they need, not what we want and who values transparency and trust. I believe that company is Amazon.

I hope that what I've said so far has piqued your interest. I welcome the opportunity to talk more. We have a lot in common.

Thanks,
Alexander Shaver
